Health Certificate for Apaca Female Brought to the AAC for Stud Purposes:

Tests must be carried out before the female is introduced to the male for covering.

The tests involve a vaginal smear for bacteria checks, a vaginal smear test for chlamydia, a chlamydia blood test as well as worming 7 to 10 days beforehand.

The veterinary surgeon also requires a short confirmation of the animal's general health and well-being.

Best regards from J. Hübner and A. Hansemann
